

Why Data Centre Maintenance is important ?

Data Centre becomes an integral part of a company. It becomes one of the important pillars for smooth business operations. Business of all types and sizes depend more and more on computers and associated electronics for a wide range of business activities and general operations.

There are many different types of equipment in Data Centre. For example, UPS, CRAC System, FM200, Genset and Monitoring System. The equipment runs 24 hours a day, 7 days a week. What crisis will have if the equipment suddenly failure?

Overheating

Data Centre unless adequate air conditional provided, there is a high risk of heat-caused equipment failure

Water Leakage

Water cool is popular use in data centre. Water Leakage in Data Centre would lead to electricity short circuit and caused equipment damage.

UPS failure

It is an unhappy experience to have your server down in power failure even there is a UPS but with the battery failure. Batteries may look in perfectly good condition from the outside but look closer and you may see leaks from the terminals or even ceill leakage from underneath.

Monitoring System failure

When Monitoring System failure, you cannot monitor the Data Centre facilities at anytime and anywhere. You cannot get the instant alert when there is any problem.

Data Centre maintenance is important to maintain the IT equipment operations that helps business continuity. This will help minimizing any chance of disruption.

How to choose a reliable Data Centre services provider is a question. Elibo Engineering Limited can provide different kind of maintenance scheme that suitable for your need.
